INTRODUCTION

I'm a software developer well-versed in PHP Laravel, Bootstrap, and UX design. I have the unique advantage of seamlessly blending technical prowess and creative vision. With my strong website design skills, I create visually appealing and user-friendly PHP applications, ensuring a superior user experience every step of the way.

EXPERIENCE

Howen Technologies Co., LTD, Shenzhen — *Product Manager*

2023 - 08 - PRESENT

Achievements:

Facilitated an introduction between the company and key dignitaries, including the Zambian Minister of Science, Minister of Transport, and the Special Assistant to the President, during the official visit of the President of Zambia to China in 2023. As of now, the company has successfully attracted significant clientele from Zambia and is positioned favorably to secure a government tender.

- Suggested and designed new product features (software and hardware)
- Collected customers' project requirements, helped them choose the suitable solution
- Trained technical teams how to use, configure and troubleshoot Howen's devices and software
- Effectively communicated product vision, milestones, and priorities to internal and external stakeholders, fostering strong relationships and buy-in.
- Led cross-functional teams through the entire product development lifecycle, from concept to launch.
- Conducted in-depth market research and competitor analysis to identify opportunities and threats. Developed and executed product strategies that resulted in revenue increment.
- Provided technical support to internal sales-team and helped them achieve sales targets faster

SKILLS

RECENT PROJECTS

Shipping & E-Commerce Website

- Developed a robust eCommerce website using PHP, using my expertise in the Laravel framework to create a secure and scalable platform for online transactions.
- Implemented front-end technologies such as HTML, CSS, and JavaScript, and worked closely with the UX design team to ensure a seamless and intuitive user experience across the site.
- I also designed and developed a logistics website with Laravel and Tailwindcss.

PROJECT LINK: <https://stc-logistics.com/>

Travel Website

- Designed and developed a dynamic tourism website that provides comprehensive functions such as train ticket reservation, hotel reservation, and travel destination selection.
- Leveraged the power of PHP and Laravel framework to build scalable and efficient web applications, ensuring seamless functionality and optimal performance.
- A comprehensive search function has been developed to allow users to easily find and book train tickets, choose from a variety of hotels, and book travel destinations according to their preferences.
- Implemented a user-friendly admin panel to manage train schedules, hotel listings, travel destinations and customer inquiries for efficient site management.
- Ensured site compatibility across devices and screen sizes, providing a consistent and engaging experience across desktop, tablet, and mobile.

Company Website

- Designed and developed a company website for a Shenzhen based LED screen manufacturer.
- The company wanted to improve their foreign trade website to build customer confidence and boost sales. I utilized Tailwindcss to build a userfriendly, attractive website, and the Laravel framework for backend.
